Abstract

The Role of the Relations between Grammatical and Contextual for the Most Commonly Used Sentences in Facilitating the Arabic Grammar: Statistical Analytical Study

The study seeks to focus on a vital functional aspect of the Arabic syntax, in terms of highlighting the role of the relationships between the components of sentences, and the role of the elements of contexts which is connected to sociolinguistic, by focusing on the most commonly used sentences to facilitate the rules of Arabic grammar and to control linguistic phenomena in a systematic way, as a contribution to the project of facilitating the Arabic grammar without contradicting its origins and its basic elements.

The researcher makes a statistical analytical transformational study on the linguistic structures and contextual elements for a whole book by Hsain Atwan by referring to ancient and recent studies that give a clear value for analyzing this aspect. The results of the study have recommended that scholars have to combine their efforts to present a simplified functional picture, and to improve the teaching methods.
