Abstract

Poetics in Modern Arabic Criticism

Hamed Rawashdeh

Mu'tah university, 2006

This study focus on the issue of poetics by analyzing study cases from the contemporary Arabic poetry and relying on the precepts of Russian formalists. In the last two decades, Arabic critical theory has given attention to the issue of poetics in modern Arabic literature. As such, this attention and importance given to the critical issue have prompted the researcher to explore it and focus on its three main applications:

The Poetics of the Title:

The title has an important function in terms of form and content, which can be an index to a fruitful analysis of the text. The title, no doubt, is an index to the poem as it creates the textual atmosphere. In this sense, the title can be an important indicator related to the concept of poetics.

Rhythm:

It is one of major foundations on which the concept of poetics is based and which is integrated into each part of the text and contributes to the whole syntactically, phonologically and semantically. Rhythm is founded on the internal music which means movement that overwhelms quietism and death and gives life and vitality to the text that would be transmitted to the receiver.

Rhythm consists of the spatial arrangement of language sounds in a temporal dimension. As such in every rhythmic feature there is an internal encounter between the elements of the norm and those that deviate from the norm in terms of syllables and tones, and between one feature and another there also occur other encounters.

Structural Deviation

This deviation is based on the violation the syntactic rules with the aim of creating fresh poetic feature that would go beyond the rigid standardization of the language.
